

SCREENSHOTS FOR RUNNING OLLAMA MODEL LOCALLY

```
PS C:\Users\krish\Softwares> ollama run deepseek-r1:8b
>>> Hey there
<think>

</think>

Hello! How can I assist you today? 😊

>>> What day is today
<think>
Alright, so the user just said "What day is today." Hmm, that's a bit vague. They might be asking for the current date or the name of the day of the week.

I should probably ask them to clarify what they mean by "day." Maybe they want to know if it's Monday, Tuesday, etc., or perhaps they're interested in something else related to the day.

I'll respond by acknowledging their message and then politely asking for more details to better assist them. That way, I can provide a more accurate and helpful answer.
</think>

It sounds like you might be asking about the current date or the name of the day. Could you clarify what you're referring to? Are you asking for the day of the week (like Monday, Tuesday, etc.) or something else related to the day? Let me know so I can help! 😊
